

Case Study

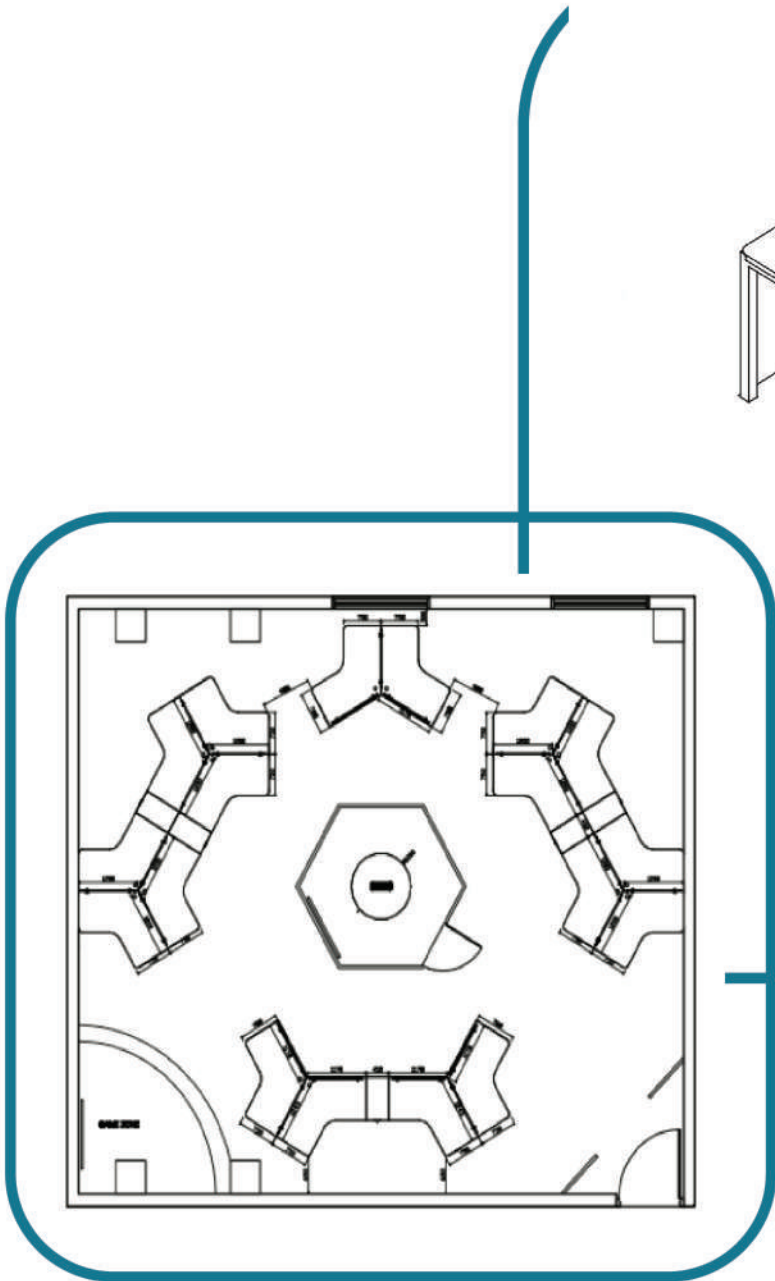

The purpose of case study is to inform our capacity and skill set to manufacture and install customized design office furniture. Modular office furniture is unique to every office with respect to design and specifications. We take the challenges as what the customers wishes. The process to take up the customization involves understanding the requirement, giving tentative costing, putting mock up of a typical cluster, color selection and then installation of the same. This cycle normally takes 3 to 7 weeks depending on the complexity of the design. The customization normally includes type of partition, shape of table, storage design and other relevant accessories. The price does increase per seater whenever the component of customization is involved and the level of it.

- 1
 - Frame 75mm thick below the table top.
 - 120 Degree workstation of size 1200mm X 1200mm x 750 mm depth.
 - Front magnetic privacy panel of 18mm thick and 300mm height.
- 2
 - Gable end special profile is 1200mm height.
 - Two module tile above top. Metal perforated tile below.
